# Jack Evans

Manchester, UK
jack@gengar.me • LinkedIn, GitHub

Senior Laravel engineer with 14 years in industry, specialising in measurable performance gains and the testing standards that keep them in place. Most recently at Nordhealth, cut critical calendar queries from 5.6s to 0.97s and global search from 3.7s to 0.3s on a healthcare platform serving clinics across Denmark, Finland and Norway, while authoring the RFCs and Testing Guide that set engineering standards across teams. Experienced in API design, authentication and compliance-driven architecture under GDPR and NIS2.

## Core Competencies

- **PHP & Laravel**: Senior-level Laravel across healthcare, hospitality, legal tech and e-commerce products; Pest, PHPUnit, Mockery, Fortify.
- **Performance & Scalability**: SQL rewrites, targeted indexing, payload slimming, database sharding strategy; 5–12x speed-ups on critical paths.
- **APIs & Authentication**: RESTful API design, OAuth, 2FA, national eID integration (MitID, BankID, HelseID), third-party delivery integrations.
- **Engineering Standards**: Automated testing guides, CI/CD, PR review practice, monitoring and alerting, technical RFCs, penetration-test remediation.
- **Full Stack & Infrastructure**: Vue 3, TypeScript, Inertia, JavaScript, Go, Python, HTML, CSS/SCSS; queues, webhooks and microservices; MySQL, Docker, AWS, Linux server administration.
- **AI-Assisted Engineering**: Claude Code as primary engineering tool, including custom hooks, skills and agent-delegation workflows.

## Professional Experience

- **Nordhealth**
  *Senior Full Stack Engineer* *Jul 2024 - Jun 2026*

  Healthcare practice management platform serving clinics across Denmark, Finland and Norway.
  - Delivered 5–6x improvement on critical calendar queries (5.6s → 0.97s) and 6–12x faster global search (3.7s → 0.3s) through SQL rewrites, targeted indexes and payload slimming
  - Authored 7 technical RFCs covering audit logging architecture, database sharding strategy, and invoice/calendar performance
  - Designed a scalable audit logging system for GDPR and healthcare compliance with immutable, permission-scoped event capture
  - Expanded the company-wide Testing Guide; established patterns for mocking, naming conventions and modular testing adopted across teams
  - Created a Console Command Playbook to standardise operational fixes, and drove PR review timeboxing and test coverage expectations to reduce support load
  - Built the greenfield Task Module, a unified "Today" view across invoices, journals and bookings, live across all EasyPractice brands
  - Owned the authentication domain, integrating 2FA and national identity verification: MitID (DK), BankID (NO) and HelseID (NO)
  - Built an AI-assisted root-cause analysis tool: a Python CLI that collects Linear, Slack, GitHub and Notion signals, with a Claude Code mode that clusters support issues and generates root-cause hypotheses and reports

- **Clicks & Mortar**
  *Senior Full Stack Engineer* *Aug 2023 - Jul 2024*
  - Maintained and evolved the core platform and its microservices, managing JustEat, UberEats and Deliveroo integrations at scale across hospitality clients and millions of users
  - Led development of customer retargeting functionality used to recover lost customers
  - Upskilled Go and React developers onto PHP/Laravel, expanding backend team capacity

- **Jacobs Enforcement**
  *Senior Systems Developer* *Feb 2023 - Aug 2023*
  - Maintained the core API underpinning the internal customer management system
  - Led the team on automated testing standards and mentored mid-weight PHP developers
- **PerchPeek**
  *Senior Software Engineer* *May 2022 - Dec 2022*
  - Delivered ~20% uplift in ticket throughput by redesigning the release process
  - Maintained core and customer-success APIs; built multiple third-party integrations
- **Lavatech / inCase**
  *Senior API Developer* *Mar 2020 - May 2022*
  - Led a team of mid-weight PHP/API developers across multiple legal-sector products, including the core internal API
  - Increased test coverage from ~8% to over 52%, and introduced application monitoring and alerting
  - Delivered multiple rounds of penetration testing; coached junior developers in core technologies
- **Boohoo**
  *PHP Developer* *Nov 2019 - Mar 2020*
  - Built an application tracking hundreds of thousands of products and samples from sourcing to sale
  - Championed CI/CD, unit testing standards, and the introduction of Vue.js, Docker and monitoring
- **e3creative (part of Dept)**
  *Backend Developer* *Mar 2018 - Nov 2019*
  - Led the rebuild and refactor of the legacy PlayStation Gear eCommerce platform
  - Resolved penetration-test security findings across PlayStation Gear and other client platforms
- *Earlier Experience* *2012 - 2018*
  Midweight Developer, First Internet (Apr 2017 - Feb 2018) · Junior Developer, Cirrus Connect (Sep 2016 - Mar 2017) · Database Administrator / Sys-Admin, Capgemini (May 2012 - Sep 2016)

## Independent Projects

- **Promotr**: Event management platform for live-music promoters. Laravel 12, Inertia, Vue, Reverb, Scout + Meilisearch, Cashier, Sanctum, Sentry. Advertising module with Meta Conversions API attribution, A/B testing and budget alerts, covered by about 29,700 tests. Built AI-first with Claude Code.
- **drinksafe.app** (github.com/MajorasJack/drinksafe.app): Community spiking reports and venue safety platform. Laravel 13, PHP 8.3, Inertia, Vue, TypeScript, Fortify, Cloudflare Turnstile, Pest 4 with browser tests. Built AI-first with Claude Code.

## Education

- **Capgemini apprenticeship**
  *City & Guilds Level 3 Diploma in IT Systems & Principles* *2016*
- **Mid Cheshire College**
  *BTEC Level 3 in ICT* *2012*

## Languages

- English (native).
